I am a truck driver and I benefit greatly with the use of my satellite radio. The variety is far above any other radio available, the traffic and weather is especially useful to me because it's non stop and I can listen to it before I enter an area and commit myself to a particular route. With local radio I'm usually in the traffic backups before I hear about it on the radio. Besides it's a service I pay for so it should not be up to public broadcasters to say what I should or should not be able to hear on my radio. I strongly urge the FCC to reject NAB's petition 04-160.
